Key components include inspecting the hydraulic hoses and fittings, checking fluid levels, examining tires or tracks for damage, inspecting the boom and attachment points, ensuring safety decals are visible, and testing all controls and safety features. **Answer** How often should I perform a skid steer daily inspection? A thorough inspection should be performed before each shift or daily operation to ensure safe and efficient machine performance. What safety precautions should I take before inspecting a skid steer? Ensure the machine is on a flat surface, turn off the engine, remove

the key, and wear appropriate personal protective equipment such as gloves and safety glasses. What are common signs of wear or damage to look for during a skid steer inspection? Look for cracked or worn tires/tracks, leaks in hydraulic lines, loose bolts, corrosion, damaged safety decals, and any abnormal wear or deformation in structural components. How can I check the hydraulic system during a daily inspection? Inspect hydraulic hoses for leaks or cracks, ensure hydraulic fluid levels are adequate, and listen for unusual noises when operating the controls. Why is it important to check the safety features during a daily skid steer inspection? Safety features like seat belts, backup alarms, and safety interlocks are critical for operator safety. Verifying their functionality prevents accidents and ensures compliance with safety standards. What should I do if I find a problem during the daily inspection? Report the issue immediately, tag the machine out of service if necessary, and perform or arrange for repairs before operating the skid steer again. Are there any tools or equipment recommended for a proper skid steer inspection? Yes, items such as a flashlight, tire pressure gauge, hydraulic fluid tester, and a maintenance checklist are helpful for a thorough inspection. Can neglecting a daily inspection lead to equipment failure? Yes, skipping daily inspections can result in unnoticed damage or wear, leading to costly breakdowns, safety hazards, and decreased machine lifespan.
