This comprehensive guide explores the principles of gardening by the moon, the lunar phases, and how to effectively plan your 2020 gardening activities according to lunar cycles.

Understanding Gardening by the Moon

Gardening by the moon is an age-old practice rooted in the belief that the moon's gravitational pull influences the moisture content and vitality of plants. This method considers the moon's phases and position in the zodiac to determine the best times for planting, pruning, watering, and harvesting.

The Science and Tradition Behind Lunar Gardening

While scientific evidence on the direct impact of lunar cycles on plant growth remains limited, many gardeners swear by the method's effectiveness. It is believed that:

- The moon's gravitational pull affects soil moisture, influencing seed germination and root development.
- The lunar cycle's phases correspond to different energies that favor specific gardening tasks.
- Aligning planting activities with lunar phases can lead to healthier plants and better yields.

Historically, lunar gardening has been practiced in cultures worldwide, from ancient China and India to European farming traditions.

The Lunar Phases and Their Significance for Gardeners

The lunar cycle spans approximately 29.5 days, passing through several distinct phases, each associated with specific gardening activities:

New Moon

- Represents new beginnings.
- Best time for planting above-ground crops such as leafy greens, herbs, and seedlings.
- Encourage seed germination and sowing of fast-growing plants.

Waxing Crescent

- The moon is increasing in illumination.
- Ideal for transplanting, sowing seeds that produce above-ground parts, and encouraging growth.
- Focus on planting crops like beans, cucumbers, and tomatoes.

First Quarter (Half Moon)

- The moon is half-illuminated.
- Suitable for pruning, cultivating, and watering.
- Good time to focus on plant maintenance.

Waxing Gibbous

- Approaching full moon.
- Continue with planting and nurturing above-ground crops.
- Fertilization during this time can boost plant development.

Full Moon

- The lunar disk is fully illuminated.
- Traditionally viewed as the best time for harvesting root crops and underground vegetables like carrots, potatoes, and onions.
- Also favorable for pruning trees and shrubs, as sap flow is high.

Waning Gibbous

- The moon begins decreasing in illumination.
- Focus on fertilizing and pest control.
- Time for planting root crops or preparing the soil.

Last Quarter (Half Moon)

- The moon is again half-illuminated but decreasing.
- Ideal for pruning and cleaning up the garden.
- Focus on disease control and soil improvement.

Waning Crescent

- The moon's illumination diminishes.
- Best for composting, mulching, and preparing beds.
- Avoid planting during this phase to prevent weak root development.
