The Core Components of TOGAF 9.2

TOGAF 9.2 comprises several interrelated components, each serving a specific purpose in guiding enterprise architecture initiatives.

1. Architecture Development Method (ADM)

The ADM is the heart of TOGAF, providing a step-by-step approach for developing and managing enterprise architectures. Its iterative cycle encompasses phases from preliminary setup to architecture change management, ensuring continuous improvement.

Key phases include:

- Preliminary Phase: Establishes the architecture framework and scope.
- Phase A: Architecture Vision: Defines the high-level goals and scope.
- Phases B, C, D: Develop business, information systems, and technology architectures.
- Phase E: Opportunities & Solutions: Identifies implementation projects.
- Phase F: Migration Planning: Develops detailed plans for transition.
- Phase G: Implementation Governance: Oversees project execution.
- Phase H: Architecture Change Management: Ensures adaptability and responsiveness.

The iterative nature of ADM allows organizations to refine architectures progressively, incorporating feedback and changing requirements.

2. Architecture Content Framework & Metamodel

This framework structures the artifacts produced during architecture development. The Content Metamodel defines the types of artifacts—such as catalogs, matrices, and diagrams—and their relationships, fostering consistency and clarity.

In Version 9.2, enhancements include:

- Better integration with modeling tools.
- Expanded artifact types for more nuanced representations.
- Clearer guidance on artifact usage in different contexts.

3. Enterprise Continuum & Architecture Repository

The Enterprise Continuum illustrates the spectrum of architectures from generic foundational models to tailored, organization-specific solutions. It encourages reusability and incremental development.

The Architecture Repository functions as a central storage for all architecture artifacts, standards, and reference models, enabling version control, governance, and knowledge sharing.

4. TOGAF Reference Models

Standard reference models, such as the TOGAF Technical Reference Model and Integrated Information Infrastructure Reference Model, provide starting points for organizations to accelerate architecture development.
